## 1. Product introduction

Grundfos ALPHA1 is a complete range of circulator pumps with the following features:

- integrated differential-pressure control enabling adjustment of pump performance to the actual system requirement
- motor based on permanent-magnet/compact-rotor technology.

The pumps are energy-optimised and comply with the requirements of the EuP directive.

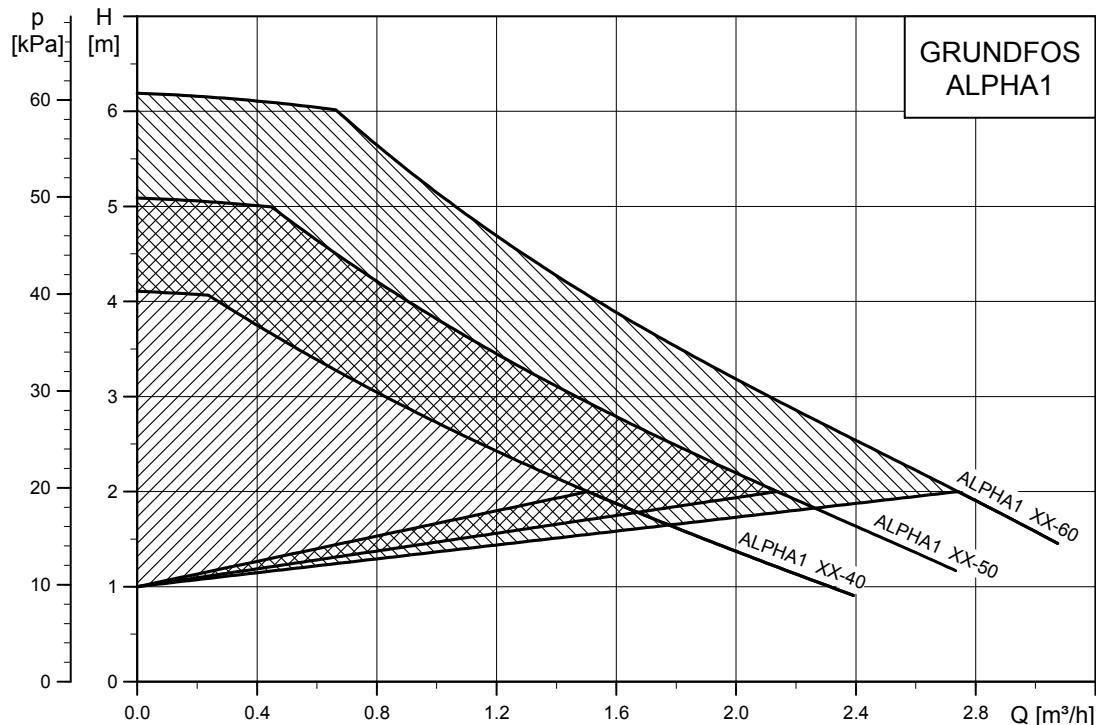

TM05 7745 1613

**Fig. 1** EuP ready

The installation of one of these pumps will reduce power consumption considerably, reduce noise from thermostatic valves and similar fittings and improve the control of the system.

The Grundfos ALPHA1 range offers a host of advantages:

### Performance range

TM04 2107 2008

**Fig. 2** Performance range

### Energy savings

High-efficient permanent-magnet motors.

### Flexibility

Suitable for installation in existing systems.

### Comfort

Low-noise operation.

### Safety

Built-in electrical and thermal protection of the pump.

### User friendliness

Simple setting and operation.

### Type key

Example	ALPHA1	25 - 40	180
Pump range			
Nominal diameter (DN) of suction and discharge ports [mm] (15 = 1", 20 = 1 1/4", 25 = 1 1/2", 32 = 2")			
Maximum head [dm]			
[ ]: Cast-iron pump housing N: Stainless-steel pump housing A Pump housing with air separator			
Port-to-port length [mm]			

\* Exception: UK version, size 15 = 1 1/2".

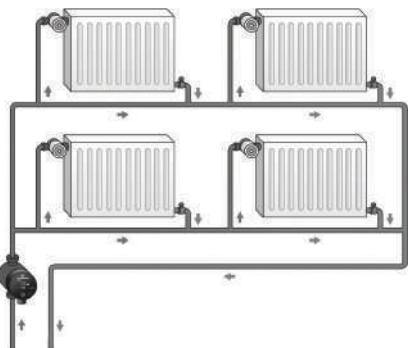

## 2. Applications

Grundfos ALPHA1 is designed for circulating liquids in heating systems.

The pumps are suitable for the following systems:

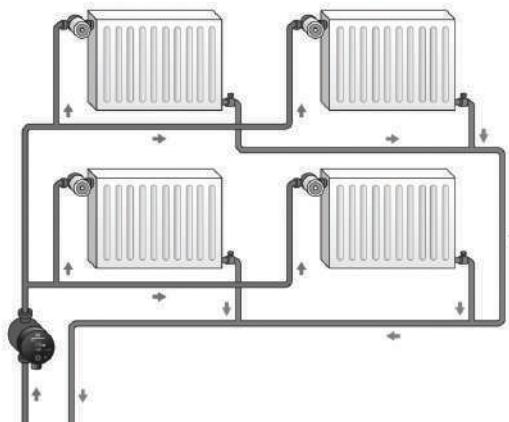

- Systems with constant or variable flows where it is desirable to optimise the pump duty point.
  - Systems with variable flow-pipe temperature.
- Grundfos ALPHA1 is especially suitable for the following:
- Installation in existing systems where the differential pressure of the pump is too high during periods of reduced flow demand.
  - Installation in new systems for automatic adjustment of the performance to flow demands without the use of bypass valves or similar expensive components.

### Examples of systems

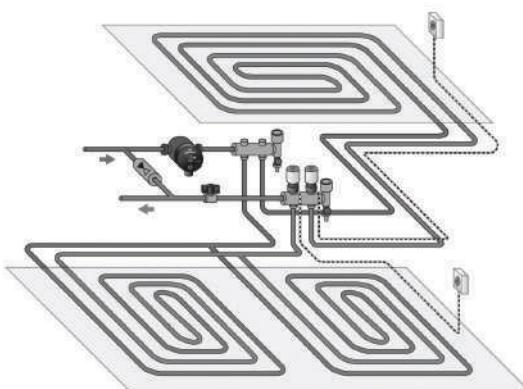

**Fig. 3** One-pipe heating system

**Fig. 5** Underfloor heating system

TM03 9890 4507

**Fig. 6** Domestic hot-water recirculation system

TM05 6574 0312

### Pumped liquids

The pump is suitable for clean, thin, non-aggressive and non-explosive liquids, not containing solid particles, fibres or mineral oil.

The pump must not be used for the transfer of flammable liquids, such as diesel oil, petrol and similar liquids.

## Control of heating systems

The heating required in a building varies greatly during the day due to changing outdoor temperatures, solar radiation and heat emanating from human beings, electric appliances, etc.

Add to this that the need for heating may vary from one section of the building to another and that the thermostatic valves of some radiators may be turned down by the users.

These circumstances will cause an uncontrolled pump to produce an excessive differential pressure when the heating demand is low.

Possible consequences:

- too high energy consumption
- irregular control of the system
- noise in thermostatic valves and similar fittings.

Grundfos ALPHA1 automatically controls the differential pressure by adjusting the pump performance to the actual heating demand, without the use of external components.

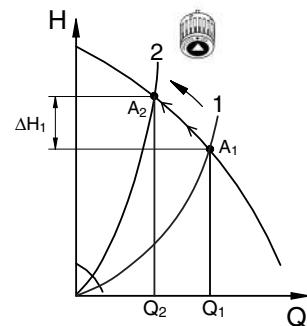

## Advantages of pump control

In Grundfos ALPHA1, control is effected by adapting the differential pressure to the flow (proportional- and constant-pressure control).

Contrary to an uncontrolled pump, the proportional-pressure-controlled ALPHA1 pump reduces the differential pressure in case of falling heating demand.

If the heating demand falls, for instance due to solar radiation, the radiator valves will close, and, for the uncontrolled pump, the flow resistance of the system will rise for instance from  $A_1$  to  $A_2$ .

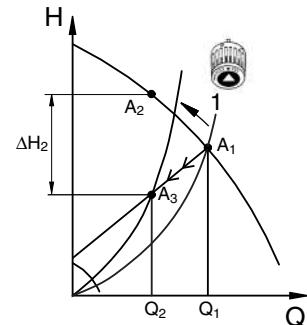

In a heating system with an uncontrolled pump, this situation will cause a pressure rise in the system by  $\Delta H_1$ .

**Fig. 7** Uncontrolled pump

TM01 9119 5002

In a system with a Grundfos ALPHA1 pump, the pressure will be reduced by  $\Delta H_2$ .

**Fig. 8** Pump in proportional-pressure control mode

TM01 9120 5002

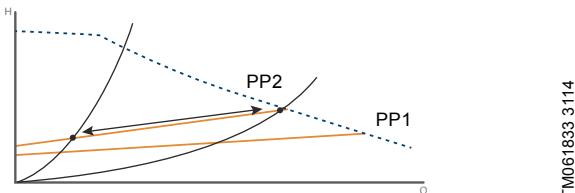

In a system with an uncontrolled pump, a pressure rise will often cause flow-generated noise in the thermostatic valves. This noise will be reduced considerably with the Grundfos ALPHA1.

The pump has the following control modes

- Proportional-pressure control
- Constant-pressure control
- Constant-curve control.

## Proportional-pressure control

Proportional-pressure control adjusts the pump performance to the actual heat demand in the system, but the pump performance follows the selected performance curve, PP1 or PP2. See fig. 9 where PP2 has been selected. See [Change of pump performance](#) for further information.

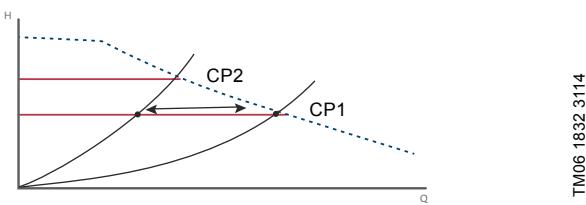

TM061833 3114

**Fig. 9** Three proportional-pressure curves/settings

## Constant-pressure control

Constant-pressure control adjusts the pump performance to the actual heat demand in the system, but the pump performance follows the selected performance curve, CP1 or CP2. See fig. 10 where CP1 has been selected. See [Change of pump performance](#) for further information.

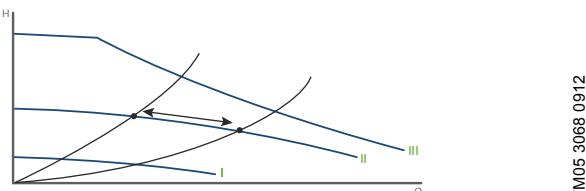

TM06 1832 3114

**Fig. 10** Three constant-pressure curves/settings

The selection of the right constant-pressure setting depends on the characteristics of the heating system in question and the actual heat demand.

## Constant-curve control

At constant-curve/constant-speed operation, the pump runs at a constant speed, independent of the actual flow demand in the system. The pump performance follows the selected performance curve, I, II or III. See fig. 11 where II has been selected. See [Change of pump performance](#) for further information.

TM05 3068 0912

**Fig. 11** Three constant-curve/constant-speed settings

The selection of the right constant-curve/constant-speed setting depends on the characteristics of the heating system in question and the number of taps likely to be opened at the same time.

### 3. Construction

Grundfos ALPHA1 is designed for long and trouble-free operation including the canned-rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid. These constructions ensure maintenance-free operation.

The pumps are characterised by the following:

- Permanent-magnet/compact-stator motor which contributes to high efficiency and high starting torque.
- Ceramic shaft and radial bearings which contribute to long life.
- Carbon thrust bearing which contribute to long life.
- Stainless-steel rotor can, bearing plate and rotor cladding which contribute to corrosion-free long life.
- Composite impeller which contributes to corrosion-free long life.
- Stainless-steel or cast-iron pump housing which contributes to flexibility.
- Automatic air-venting which contributes to easy commissioning.
- Compact design featuring pump head with integrated control box and control panel which fit into most common installations.

#### Stainless-steel versions N

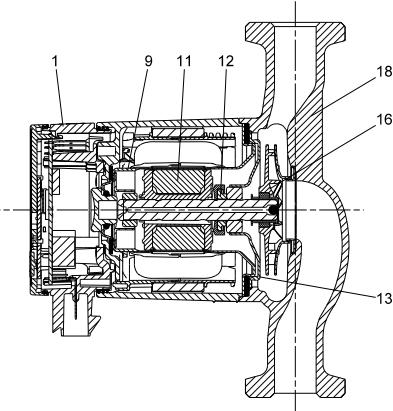

The pump housing of the stainless-steel versions is painted in red colour. The stainless-steel versions can be identified by the N in the type key or by the silver ring around the display. See fig. 12.

Fig. 12 Stainless-steel version N

\* ALPHA1 20-45 N

\*\* ALPHA1 XX-40, XX-50, XX-60 N

## Motor and control box

The motor is a 4-pole synchronous permanent-magnet motor.

The pump controller is incorporated in the control box, which is fitted to the stator housing with screws.

### Control panel

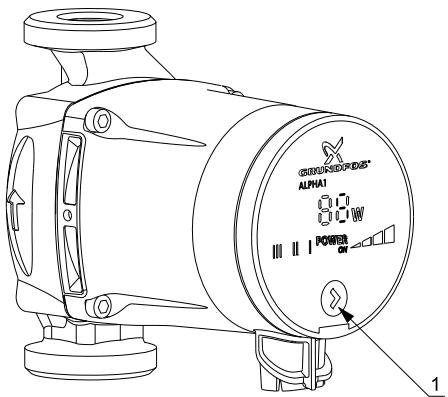

The control panel is located on the front and is connected to the stator via a terminal plug.

The control panel has:

- a push-button (fig. 14, pos. 1) for selection of pump setting
- seven light fields for indication of the selected pump setting
- "POWER ON" light field
- a 2-digit, 7-segment display.

The light in the display is on when the power supply has been switched on. During operation, the display shows the actual pump power consumption in Watt (in whole numbers). Accuracy:  $\pm 5\%$ .

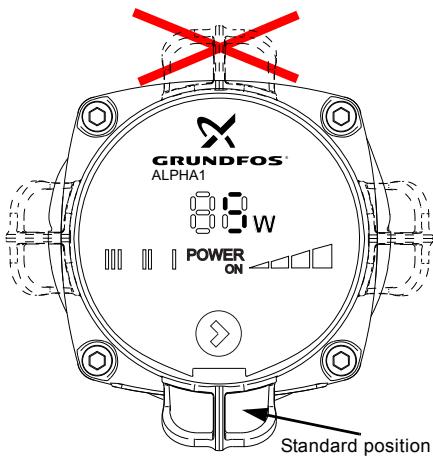

The "POWER ON" light field indicates that the power supply has been switched on. When the "POWER ON" light field is on and the display shows "--", a fault preventing the pump from operating properly (for example seizing-up) has occurred.

TM05 7967 1713

Fig. 14 Push-button position

## Control box positions

TM05 7966 1713

Fig. 15 Possible control box positions

## ALPHA cable with plug

The plug incorporates cable relief and a locking function for securing the supply cable connection.

TM05 3073 0612

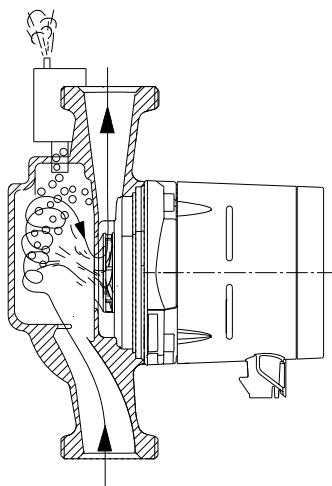

Fig. 16 ALPHA plug with cable relief and angled ALPHA plug with fixed cable

## Unique air vent system

The pump housing with air separator is installed in systems where the liquid contains so much air that a circulator pump without air separator cannot start or keep up a continuous circulation. The pump housing is available only for upward water flows.

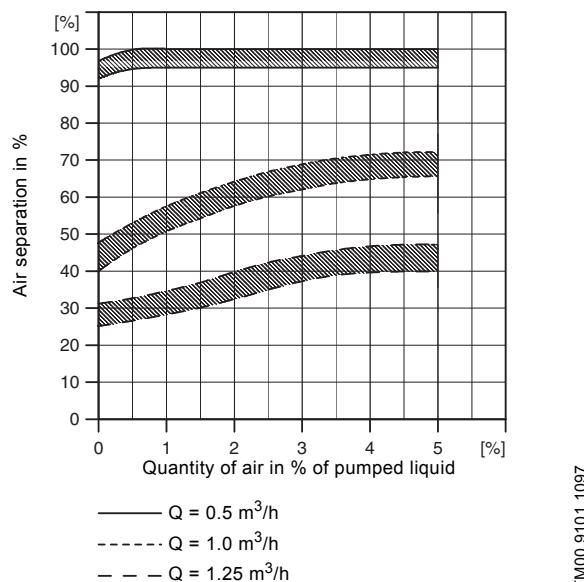

The air-containing liquid is guided from the suction port to the nozzle of the air-separating chamber and caused to circulate considerably in the relatively large chamber, thus creating a relatively lower pressure at the back (top) of the chamber. This lower pressure combined with the reduced velocity of the liquid in the air-separating chamber will cause a separation of air from the liquid. Due to its lower density, the air will escape through an automatic air vent fitted to the air-separating chamber.

The pump housing has an Rp 3/8 tapping for fitting of an air vent. The air vent is not supplied with the pump.

TM05 2521 0112

Fig. 17 Pump housing with air-separating chamber

TM00 9101 1097

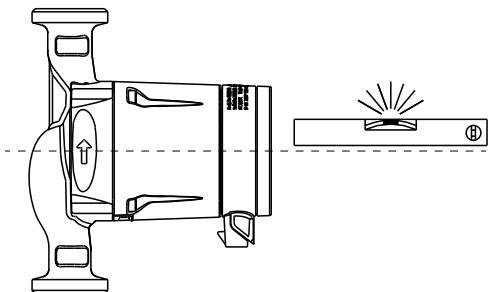

Fig. 18 Air separation

## 4. Installation and startup

### Installation

In most cases, the installation of the Grundfos ALPHA1 is reduced to the mechanical installation and the connection to the power supply.

The pump must always be installed with horizontal motor shaft.

TM03 8501 1707

Fig. 19 Horizontal motor shaft

### Electrical data

<b>Supply voltage</b>	1 x 230 V - 10 %/+ 10 %, 50/60 Hz, PE
<b>Motor protection</b>	The pump requires no external motor protection.
<b>Enclosure class</b>	IP42
<b>Insulation class</b>	F
<b>Relative air humidity</b>	Maximum 95 %
<b>Ambient temperature</b>	0-40 °C
<b>Temperature class</b>	TF110 to CEN 335-2-51
<b>EMC (electromagnetic compatibility)</b>	EN 55014-1:2006 and EN 55014-2:1997
<b>Sound pressure level</b>	≤ 43 dB(A)

### Startup

The pump must not be started until the system has been filled with liquid and vented. Furthermore, the required minimum inlet pressure must be available at the pump inlet. The system cannot be vented through the pump.

The pump is self-venting and does not require venting before startup.

### Liquid temperature

To avoid condensation in the control box and stator, the liquid temperature must always be higher than the ambient temperature. See table below.

Ambient temperature [°C]	Liquid temperature	
	Min. [°C]	Max. [°C]
0	2	110
10	10	110
20	20	110
30	30	110
35	35	90
40	40	70

### System pressure

PN 10: Maximum 1.0 MPa (10 bar).

### Inlet pressure

To avoid cavitation noise and damage to the pump, the following minimum pressures are required at the pump suction port.

Liquid temperature		
75 °C	90 °C	110 °C
0.5 m head	2.8 m head	10.8 m head

### Setting the pump

Using the push-button on the control box, the electronically controlled pump can be set to the following:

- two constant-pressure curves
- two proportional-pressure curves
- three fixed-speed curves.

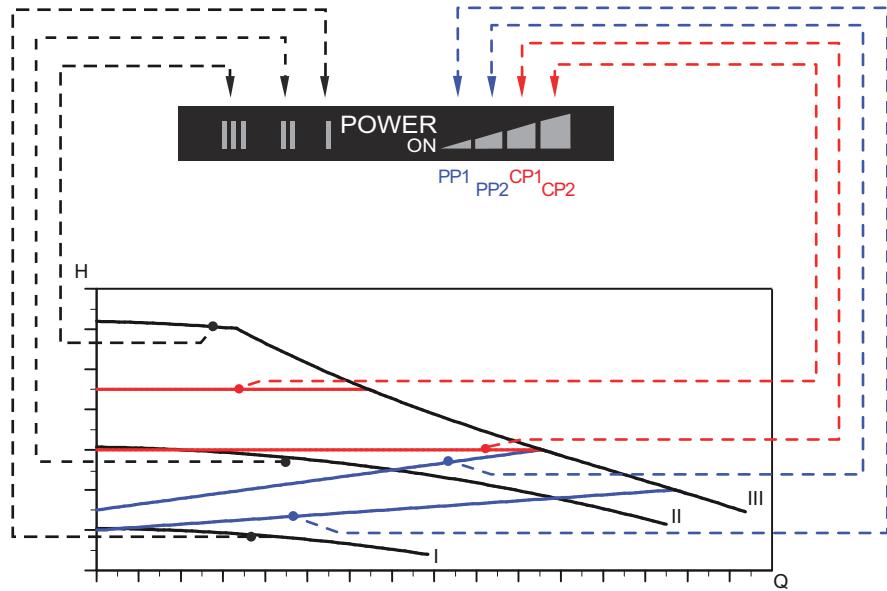

### Factory setting

The pump has been factory-set to proportional-pressure curve (PP2). See fig. 20.

This setting is suitable for the majority of all single-family houses.

## Change of pump performance

The pump performance (flow and head) can be changed by pressing the control box push-button as indicated in fig. 20 and the table below.

TM04 2532 2608

**Fig. 20** Pump setting in relation to performance

Setting	Pump curve	Function
PP1	Lowest proportional-pressure curve	The duty point of the pump will move up or down on the lowest proportional-pressure curve, depending on the heat demand in the system. See fig. 20. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
PP2	Highest proportional-pressure curve	The duty point of the pump will move up or down on the highest proportional-pressure curve, depending on the heat demand in the system. See fig. 20. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
CP1	Lowest constant-pressure curve	The duty point of the pump will move out or in on the lowest constant-pressure curve, depending on the heat demand in the system. See fig. 20. The head (pressure) is kept constant, irrespective of the heat demand.
CP2	Highest constant-pressure curve	The duty point of the pump will move out or in on the highest constant-pressure curve, depending on the heat demand in the system. See fig. 20. The head (pressure) is kept constant, irrespective of the heat demand.
III	Speed III	The pump runs at a constant speed and consequently on a constant curve. At speed III, the pump is set to run on the maximum curve under all operating conditions. See fig. 20. Quick venting of the pump can be obtained by setting the pump to speed III for a short period.
II	Speed II	The pump runs at a constant speed and consequently on a constant curve. At speed II, the pump is set to run on the intermediate curve under all operating conditions. See fig. 20.
I	Speed I	The pump runs at a constant speed and consequently on a constant curve. At speed I, the pump is set to run on the minimum curve under all operating conditions. See fig. 20.

## 5. Guide to performance curves

### Energy labelling

The Grundfos ALPHA1 is energy-optimised and complies with the EuP Directive (Commission Regulation (EC) No. 641/2009) which has been in effect since 1 January 2013.

For more information about the new energy directive, please visit:

[Energy.grundfos.com](http://Energy.grundfos.com)

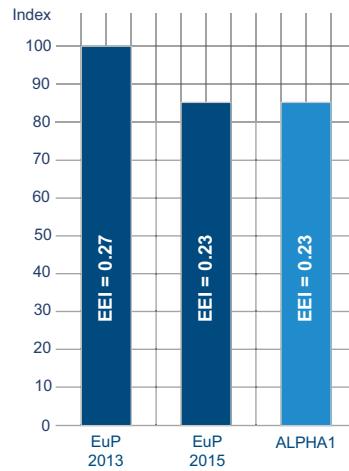

TM05 2683 0412

### Curve conditions

The guidelines below apply to the performance curves on the following pages:

- Test liquid: airless water.
- The curves apply to a density of  $\rho = 983.2 \text{ kg/m}^3$  and a liquid temperature of  $60^\circ\text{C}$ .
- All curves show average values and should not be used as guarantee curves. If a specific minimum performance is required, individual measurements must be made.
- The curves for speeds I, II and III are marked.
- The curves apply to a kinematic viscosity of  $\nu = 0.474 \text{ mm}^2/\text{s}$  ( $0.474 \text{ cSt}$ ).
- The conversion between head  $H [\text{m}]$  and pressure  $p [\text{kPa}]$  has been made for water with a density of  $\rho = 1000 \text{ kg/m}^3$ . For liquids with other densities, for example hot water, the discharge pressure is proportional to the density.

The EEI values for GRUNDFOS ALPHA1 pumps are far below the EuP 2013 value and comply with the requirements for 2015. See fig. 21.

TM05 8266 2213

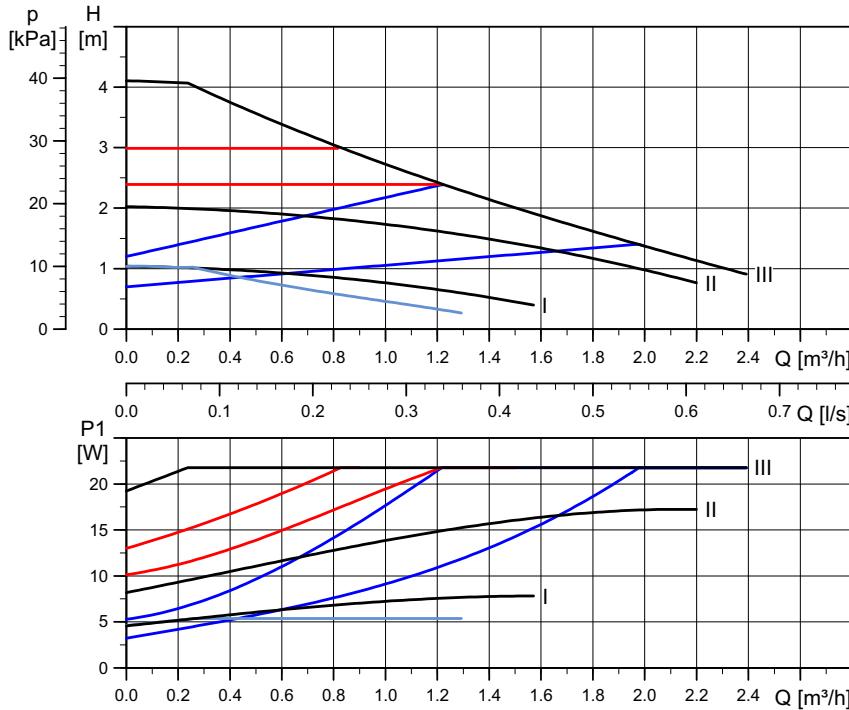

**Fig. 21** EEI limits and the current positioning of the ALPHA1

With an energy efficiency index (EEI) at the EuP 2015 requirement level, you can achieve considerable energy savings compared to a typical circulator pump and thus a remarkably fast return on investment.

## 7. Accessories

### Union and valve kits

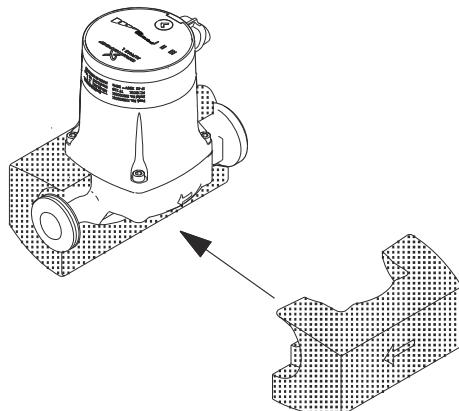

Pump type	Description	Material	Product number
ALPHA1 25-40	3/4" unions	Cast iron	529921
ALPHA1 25-60	1" unions	Cast iron	529922
ALPHA1 32-40	1" unions	Cast iron	509921
ALPHA1 32-60	1 1/4" unions	Cast iron	509922

### Insulating kits

Grundfos ALPHA1 pumps can be fitted with two insulating shells.

The insulation thickness of the insulating shells corresponds to the nominal diameter of the pump.

The insulating kit, which is tailored to the individual pump type, encloses the entire pump housing. The two insulating shells are easy to fit around the pump.

TM04 2806 3208

Fig. 22 Insulating shells

Pump type	Product number
Insulating shells (not available for ALPHA1 20-45)	505821
Insulating shells for ALPHA1 XX-XX A pumps (with air separator)	505822

### ALPHA plugs

TM05 3073 0612

Fig. 23 ALPHA plugs

Pos.	Description	Product number
1	ALPHA plug, standard plug connection	98284561
2	ALPHA angle plug, standard angle plug connection	98610291
3	ALPHA plug, 90 ° bend, including 4 m cable	96884669

Grundfos offers a special cable with an active built-in NTC protection circuit which will reduce possible inrush currents. To be used in case of e.g poor quality of relay components which are sensitive to inrush current.

## 8. Product range

The sales regions for the Grundfos ALPHA1 pumps are structured as shown in the map below.

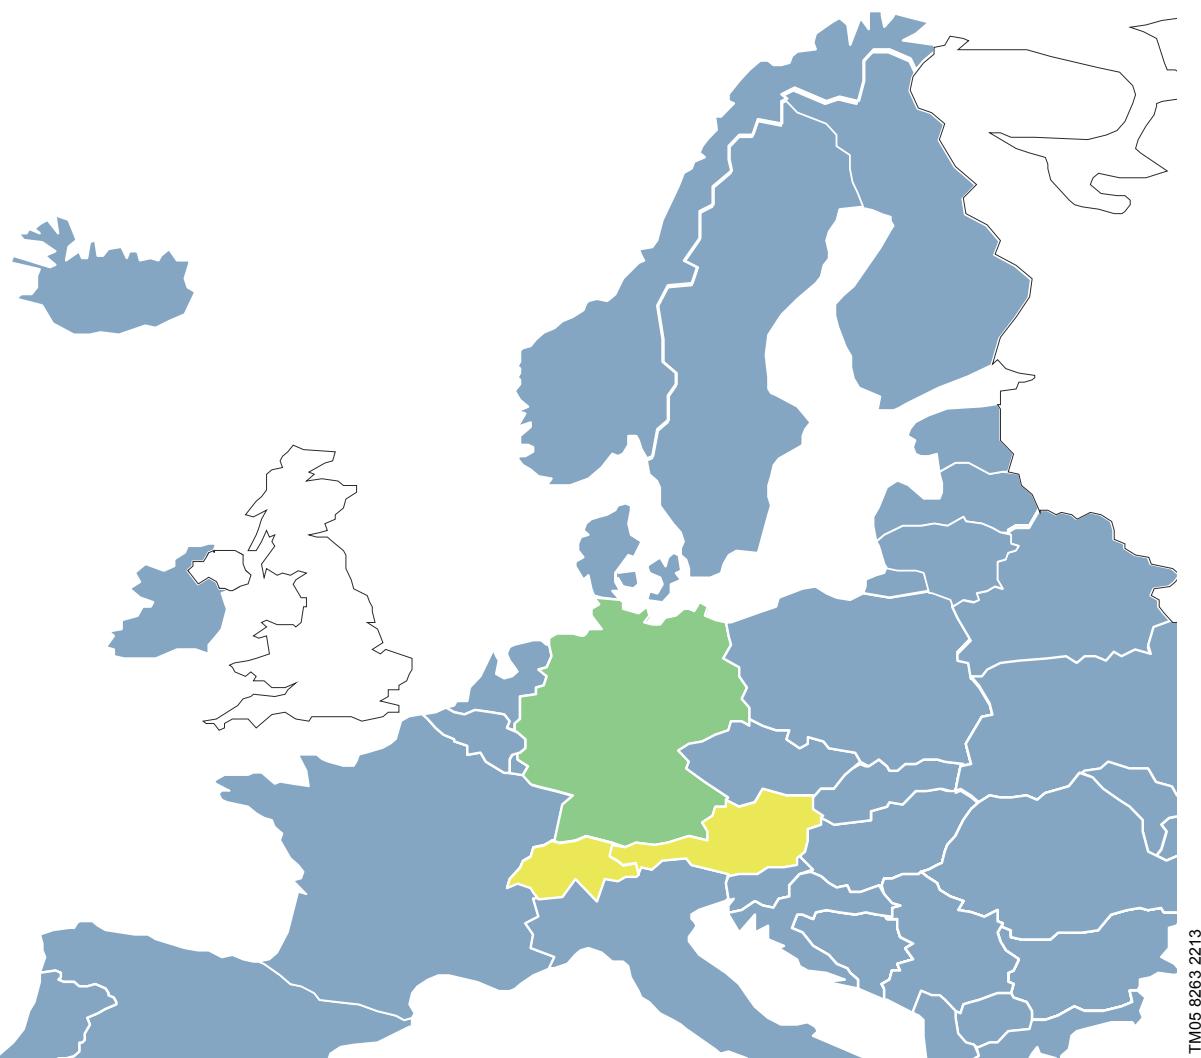

Fig. 24 Sales regions (clusters)

Colour	Companies	Countries
<span style="background-color: green; display: inline-block; width: 15px; height: 15px;"></span>	GWS	Germany
<span style="background-color: yellow; display: inline-block; width: 15px; height: 15px;"></span>	GPO, GPS	Austria, Switzerland
<span style="background-color: #4a7ebb; display: inline-block; width: 15px; height: 15px;"></span>		All other countries, except United Kingdom, Japan, North America and Russia

**ALPHA1 (N), Germany**

**Note:** Click on the product number and go directly to the performance curve in WebCAPS.

## 9. Further product information

### WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program available on [www.grundfos.com](http://www.grundfos.com).

WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

#### Catalogue

Based on fields of application and pump types, this section contains the following:

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

#### Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

#### Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, the section contains service videos showing you how to replace service parts.

The figure consists of three vertically stacked screenshots of the WebCAPS software interface:

- Screenshot 1: Installation Type Selection**  
Shows three options: "Borehole installation, open tank", "Borehole installation, closed tank", and "Borehole installation, no tank".
- Screenshot 2: Replacement Guide**  
Shows a search criteria panel and a detailed pump performance curve for a CR 8-20/1 pump. The curve plots Head (m) from 0 to 10 against Q (m³/h) from 0 to 12. Technical specifications listed include: Product name: CR 10-1 A-P-I-E HQQE; Product No: 96501008; SAE number: 5700396213514; Speed for pump: 2873 rpm; Rated flow: 10 m³/h; Rated head: 7.1 m; Impellers: 01; Type of shaft seal: HQQE; Approval on pump: CE; Curve tolerance: ISO 9906 Annex A.
- Screenshot 3: CAD Drawings Selection**  
Shows a list of available CAD files for a CR 10-4 pump, including Dxf (1049k), Dwg (1549k), Dwg (1449k), Dwg (177k), Dwg (740kb), and Step (564kb). A download button is at the bottom.

## WinCAPS

Fig. 25 WinCAPS DVD

### Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation.
- Carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- Analyse your selected pump via the built-in life cycle cost tool.
- Determine the flow velocity in wastewater applications, etc.

### Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

### CAD drawings

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

#### 2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

#### 3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.

## GO CAPS

Mobile solution for professionals on the GO!

CAPS functionality on the mobile workplace.
